tritile.itx

Type: Color, Bump.

This texture is just like Bathroom Tile except that it applies itself as triangle shaped tiles.

REQUESTER TABS

- ***Color***
  - ♦ Grout Color: These values will tell the texture what color to make the spaces between the tiles. A negative number in any of these parameters will turn off the addition of color.
- ***Size***
  - ♦ X and Y Size: These parameters are used to scale the tile. By setting these to non−equal numbers, you can change the shapes of the triangles that make up the tile.
  - ♦ Bevel Width: This parameter represents what fractional part of the tile surface will be beveled.
  - ♦ Bevel Slope Adjust: This adjusts the apparent steepness of the bevel on the tile.
  - ♦ Grout Width: Grout width represents the width (again as a fraction of the tile size) of the spaces between the tiles.
- ***Controls***
  - ♦ Checks Enable: Any positive value in this parameter will turn off the texture over every other tile so that the tiles get applied in a Chinese checker−board pattern.
